

Gen AI basic answers

Party A -13.5 pts $\leftarrow$ base points + 0.064 $\times$ 82.0 (Age) = +5.25 + 2.00 $\times$ 0 (Govt. satisfaction) = +0 + 0.062 $\times$ Yes (Urban voter) = +0.062 ----- = -8.21 pts
Party T 9.21 pts $\leftarrow$ base points - 0.087 $\times$ 82.0 (Age) = -7.11 - 1.54 $\times$ 0 (Govt. satisfaction) = +0 + 2.22 $\times$ Yes (Urban voter) = +2.22 ----- = 4.31 pts
Party C -1.48 pts $\leftarrow$ base points + 0.140 $\times$ 82.0 (Age) = +11.5 - 0.948 $\times$ 0 (Govt. satisfaction) = +0 - 0.216 $\times$ Yes (Urban voter) = -0.216 ----- = 9.81 pts
Undecided -0.968 pts $\leftarrow$ base points + 0.016 $\times$ 82.0 (Age) = +1.33 + 0.313 $\times$ 0 (Govt. satisfaction) = +0 + 0.734 $\times$ Yes (Urban voter) = +0.734 ----- = 1.09 pts
 ----- highest score wins $\rightarrow$ Party C

Step 2a - convert each score to e^score (always positive)

Party A $e^{-8.21} = 0.000$

Party T $e^{4.31} = 74.7$

Party C $e^{9.81} = 18,263$

Undecided $e^{1.09} = 2.98$ ----- Total (add all 4 up) = 18,341

Step 2b - each class's share = its own e^score $\div$ that same total (18,341)

Party A $0.000 \div 18,341 = 0.0\%$

Party T $74.7 \div 18,341 = 0.4\%$

Party C $18,263 \div 18,341 = 99.6\%$

Undecided $2.98 \div 18,341 = 0.0\%$ ----- All 4 shares add back up to 100% - that's the whole point of dividing by the same total. e (≈ 2.71828) is just a fixed constant that turns any score positive and stretches the gap between a high score and a low one.

Step 1 - each class gets its own score = base + (weight $\times$ this voter's value), added up

Party A -13.5 pts $\leftarrow$ base points + 0.064 $\times$ 28.0 (Age) = +1.79 + 2.00 $\times$ 0 (Govt. satisfaction) = +0 + 0.062 $\times$ Yes (Urban voter) = +0.062 ----- = -11.7 pts

Party T 9.21 pts $\leftarrow$ base points - 0.087 $\times$ 28.0 (Age) = -2.43 - 1.54 $\times$ 0 (Govt. satisfaction) = +0 + 2.22 $\times$ Yes (Urban voter) = +2.22 ----- = 9.00 pts

Party C -1.48 pts $\leftarrow$ base points + 0.140 $\times$ 28.0 (Age) = +3.93 - 0.948 $\times$ 0 (Govt. satisfaction) = +0 - 0.216 $\times$ Yes (Urban voter) = -0.216 ----- = 2.23 pts **U**

ndecided -0.968 pts $\leftarrow$ base points + 0.016 $\times$ 28.0 (Age) = +0.453 + 0.313 $\times$ 0 (Govt. satisfaction) = +0 + 0.734 $\times$ Yes (Urban voter) = +0.734 ----- = 0.219 pts

----- highest score wins $\rightarrow$ Party T

Step 2a - convert each score to e^score (always positive)

Party A $e^{-11.7} = 0.000$

Party T $e^{9.00} = 8095$

Party C $e^{2.23} = 9.31$

Undecided $e^{0.219} = 1.24$ ----- Total
(add all 4 up) = 8105

Step 2b - each class's share = its own e^score $\div$ that same total (8105)

Party A $0.000 \div 8105 = 0.0\%$

Party T $8095 \div 8105 = 99.9\%$

Party C $9.31 \div 8105 = 0.1\%$

Undecided $1.24 \div 8105 = 0.0\%$ ----- All 4 shares add back up to 100% - that's the whole point of dividing by the same total. e (≈ 2.71828) is just a fixed constant that turns any score positive and stretches the gap between a high score and a low one.

Base salary - the starting value, before any feature counts 3.10 LPA Experience 0.966 LPA per year $\times$ 11.5 yrs = +11.1 LPA Skill rating 1.34 LPA per point $\times$ 7.00 /10 = +9.39 LPA ----- TOTAL 23.6 LPA

THE TRAINED MODEL

Salary_LPA in LPA = 3.10 LPA $\leftarrow$ base salary (minimum) + 0.966 LPA per year $\times$ Experience + 1.34 LPA per point $\times$ Skill rating
